Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 drawn to control device for mixing audio signals, classified in class 381, subclass 119.
- II. Claim 10, drawn to a method of positioning sound relative to the movement of a camera and sound sources, classified in class 381, subclass 310.

The inventions are distinct, each from the other because:

Inventions I and II are related as subcombination and combination respectively. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed in Group II does not require the particulars of the subcombination as claimed in Group I because the signal positioning as claimed in Group II does not require the device as claimed in Group I. The subcombination has separate utility such as being capable of mixing signals for the purpose of reproducing music at a nightclub or providing three-dimensional sound for virtual reality purposes.

Art Unit: 2644

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
